

## Photography guide:

In order to be able to guarantee you a good result, the starting material (your pics) is of decisive importance. We would therefore like to ask you to observe the following points when creating your car images:

| WRONG   | FORMAT  | CORRECT  |
|---|---|--|
|  <div data-bbox="291 1289 544 1350">Portrait format</div> | <p>When taking photos, please pay attention to the format of the picture - do not take pictures in portrait format.</p> |  |

| WRONG  | Distance  | CORRECT   |
|--|---|---|
|   | <p>When photographing, please pay attention to the distance to the car and try to photograph all desired side views from the same distance (approx. 5m) to the center of the car.</p> |  |
|  |   |   |

| WRONG  | Height  | CORRECT   |
|--|---|---|
|  <p data-bbox="230 667 392 727">Too high</p>    | <p data-bbox="1003 339 1285 639">When photographing, please pay attention to the height or position the camera at a height of approx. 1.30-1.40m. We recommend using a tripod for consistent results.</p> |  |
|  <p data-bbox="230 1193 392 1254">Too deep</p> |   |   |

**WRONG**

Too bright

**BRIGHTNESS**

When photographing, please pay attention to the brightness of the pictures and try to create the pictures under constant lighting conditions.

**CORRECT**

Too dark

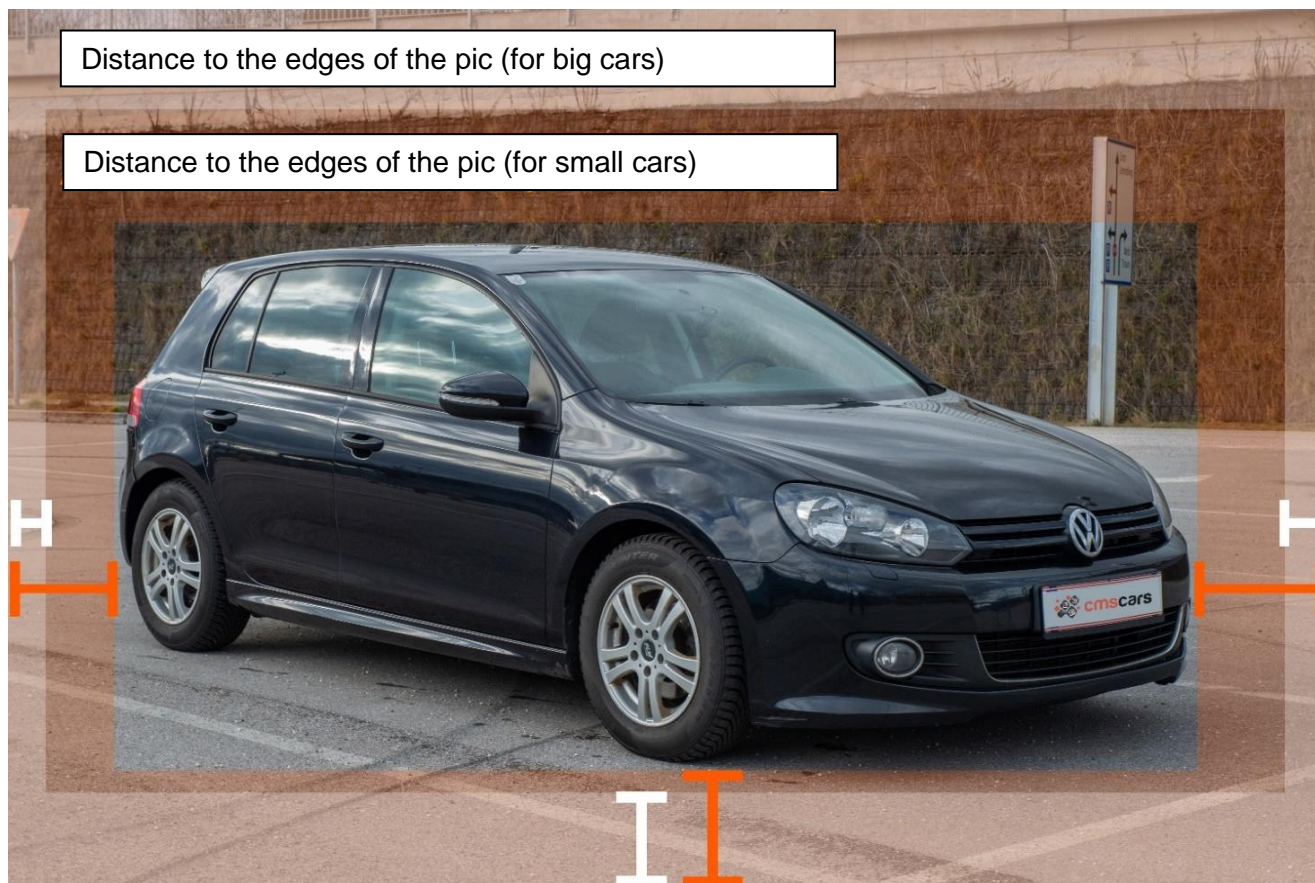

### Further important tips:

**Distances:** Taking into account the points listed above, the car should have the approximate distances shown on the right to the edges of the picture. For larger cars, the distance should be a little smaller or the car should be photographed in a more format-filling manner so that the difference in size can also be seen in the end result.

**Background:** We recommend creating your cars in front of a neutral / single-colored background (e.g. gray wall) without any annoying objects that can be seen through the windows.

**Data upload:** In order to avoid unnecessary amounts of data and still achieve maximum quality, we recommend uploading the images in .jpg file format with a **resolution** of around 3000 x 2000 pixels.

**Camera setting:** We recommend customers with to take photos in raw format and digitally optimize the exposure beforehand. Furthermore, the car should be photographed in the focal length range of 50mm - under no circumstances use wide angle.

We are looking forward to a good cooperation!  
Yours cmscars team!
